Hosting providers manage the servers that make websites available to the public.

Examples: MediaTemple, Dreamhost, A Small Orange, Gandi, Amazon AWS, OpenShift

Domain registrars and DNS providers
connect domain names to particular servers.

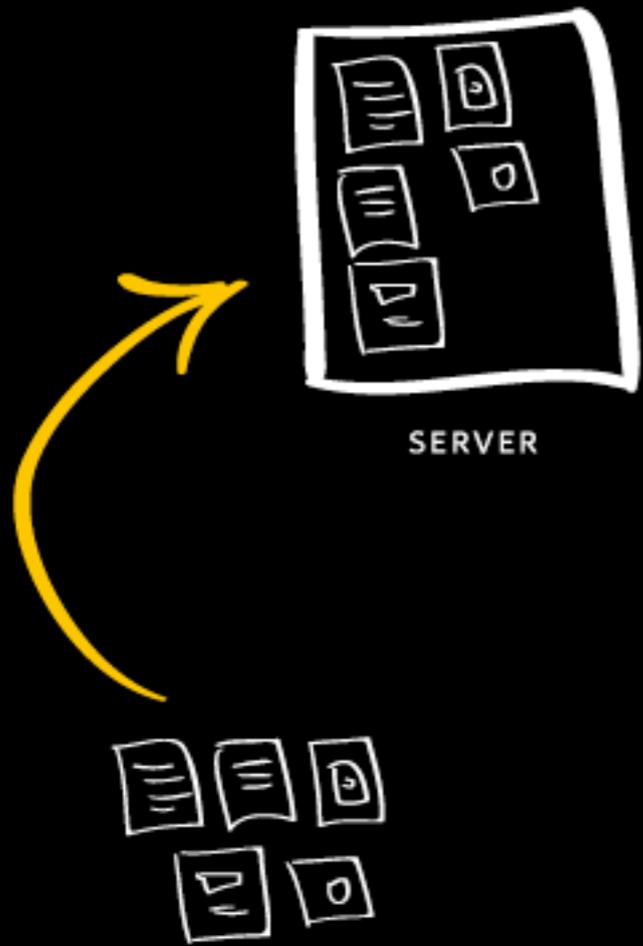

Usually, domain registration
comes bundled with DNS services.

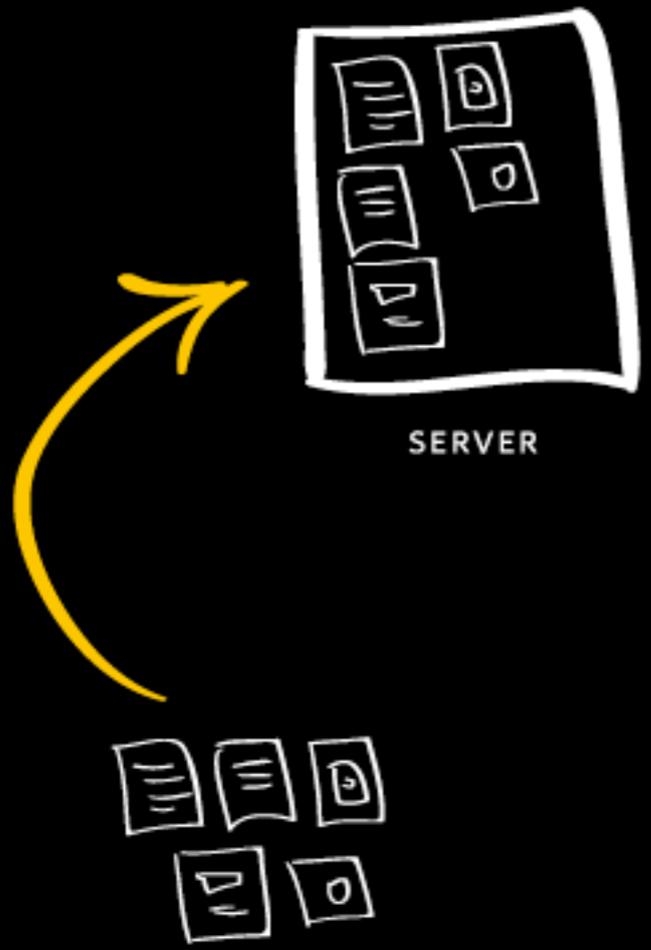

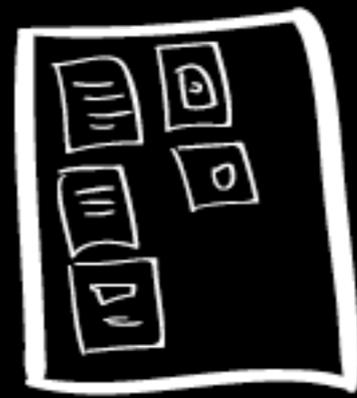

SERVER

DOMAIN REGISTRAR

FTP software lets you upload, download, and modify files on a remote server.

Most FTP clients will connect over one of three related protocols, **FTP**, **SFTP**, and **SSH**.
